

RAISE 2026

2nd Workshop on Robotics & Artificial Intelligence in Systems Engineering

Organized by

RESDA
Renewable Energy & Sustainable Development Association

CES
Computer & Embedded Systems Laboratory

The Renewable Energy & Sustainable Development Association (RESDA) is organizing the 2nd Workshop on Robotics & Artificial Intelligence in Systems Engineering (RAISE 2026) from 14th to 16th July 2026 at ISGIS.

General chair

Houssam Chouikhi (ISSIG / LASEM)

General co-chair

Omar Cheikhrouhou (ENETCOM / CES)

Honorary Chairs

Prof. Hatem Bentaher (ISGIS / LASEM)

Prof. Mouna Baklouti (ENIS / CES)

Steering committee

Prof. Anis Koubaa (Alfaisal University, KSA / ScaleX Innovation)

Prof. Hatem Bentaher (ISGIS / LASEM)

Omar Cheikhrouhou (ENETCOM / CES)

Houssam Chouikhi (ISSIG / LASEM)

Nidhal Ayadi (Basil Shine Farm / RESDA)

Guest speakers

Prof. Anis Koubaa (Alfaisal University, KSA / ScaleX Innovation)

Prof. Souhail Dhoub (ISGIS)

Prof. Adel Alimi (ENIS)

Organizing committee

Prof. Hatem Bentaher (ISGIS / LASEM)

Prof. Ahmed Elloumi (ISAMS / LASEM)

Prof. Mouna Baklouti (ENIS / CES)

Nidhal Ayadi (Basil Shine Farm / RESDA)

Seif Hadrich (BlueBox Lab / RESDA)

Amira Echtioui (ENSTAB / ATMS)

Olfa Gaddour (ENIS / CES)

Manel Hentati (ENETCOM / CES)

Yassine Aydi (ISAMS / CES)

Bassem Hadjkacem (FSTSB / CES)

Atidel Ghorbel (ENIS / LASEM)

Zeineb Boumallessa (ENIT / LASEM)

14-16
July 2026

ISGI - Sfax
Tunisia

THEME

Agentic Robotics & VLA Models for Smart Agriculture

“ RAISE 2025 ended at *diagnosis* — robots could detect a sick plant. RAISE 2026 closes the loop: robots that decide what to do and physically act on the field, powered by two of the strongest 2026 AI trends.

High-level brain — Agentic LLM

Mission planning, task decomposition, tool-calling, re-planning on failure. Built with Claude / GPT and the Model Context Protocol (MCP).

Low-level brain — Vision-Language-Action (VLA)

Language-conditioned manipulation learned from demonstrations. Built on OpenVLA, $\pi 0$, SmolVLA — accessed via API.

WORKSHOP PROGRAM HIGHLIGHTS

DAY 1

Agentic Robotics:
Making the Robot Think

Goal: an LLM-driven robot autonomously inspects the greenhouse and produces a structured field report.

DAY 2

Vision-Language-Action:
Making the Robot Act

Goal: the robot executes natural-language manipulation instructions via a hosted VLA endpoint.

DAY 3

Integration & Hackathon COMPETITION

Goal: combine the planner (Day 1) and executor (Day 2) into one end-to-end agentic system. Compete.

NETWORK

Connect with experts and researchers

INNOVATE

Explore the latest AI & robotics trends

IMPACT

Advance sustainable smart agriculture

COMPETE

Participate in the hackathon challenge

COLLABORATE

Build partnerships for the future
